

HYPER-LINKED COMMUNICATIONS

WebRTC enabled asynchronous collaboration

Friday 27th May, 2016

3. Architecture
4. Implementation
5. Evaluation
6. Conclusions
7. Future Work

INTRODUCTION

Written communication could never replace face to face communication.

“No computer in our lifetimes will ever rival a human voice’s capacity to conveying rich and complex social and emotional meaning”

— Geddes, Martin

Today, we can achieve more.

Real-time communication applications can make a difference on business, education and health sectors.

An application that provides a collaborative environment and a way to remember our past communications would be a strong tool.

THESIS GOALS

Allow multi party conference calls.

Record and playback interactive video.

Create a collaborative environment

Use only standard technologies like JavaScript, WebRTC, HTML5 and CSS3.

RELATED WORK

STATE OF THE ART OVERVIEW

1. Connection Establishment
2. Streaming audio and video
3. Overlay communications with content
4. Collaboration Environment

CONNECTION ESTABLISHMENT

- Network Address Translation

- STUN + TURN = ICE

WebRTC (Web Real-Time Communications)

- Access to camera, microphone and screen*
- Peer to Peer file and stream sharing
- Standardized protocols
- No plug-ins required

* requires installing a plug-in yet.

OVERLAY COMMUNICATIONS WITH CONTENT

- **Concepts:** HyperText & HyperMedia & HyperCommunications & Detail on Demand
- **Implementations:** HyperCafe & HyperHitchcock

Table: Comparison between Operational Transformation libraries

Library	Own Server	Own Storage	Operations
ShareJS	✓	✓	text+objects
TogetherJS	✓	✗	text+objects
Goodow	✓	✓	text+objects
Etherpad Lite	✓	✓	extendable
OT.js	✗	✗	text

OVERVIEW

					
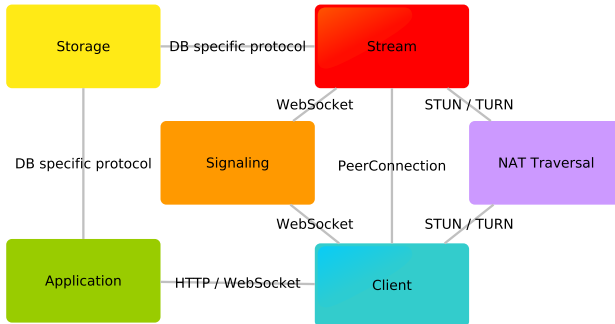

Name	Skype	Hangouts	Jitsi	Kurento	Our proposal
Technology	Proprietary	WebRTC ¹	WebRTC	WebRTC	WebRTC
Development	✗	✓ ²	✓	✓	✓
Audio/Video	✓	✓	✓	✓	✓
Text Messaging	✓	✓	✓	✗	✓
Collaborative Editor	✗	✓	✓	✗	✓
File sharing	✓	✓	✓	✗	✓
Recording & Playback	✗	✗	✗	✓	✓
Interactive Content	✗	✗	✗	✗	✓

¹ requires installing a plug-in on non chrome web browsers.

² allows the development of extensions.

ARCHITECTURE

MODULES

SYSTEM INFRASTRUCTURE

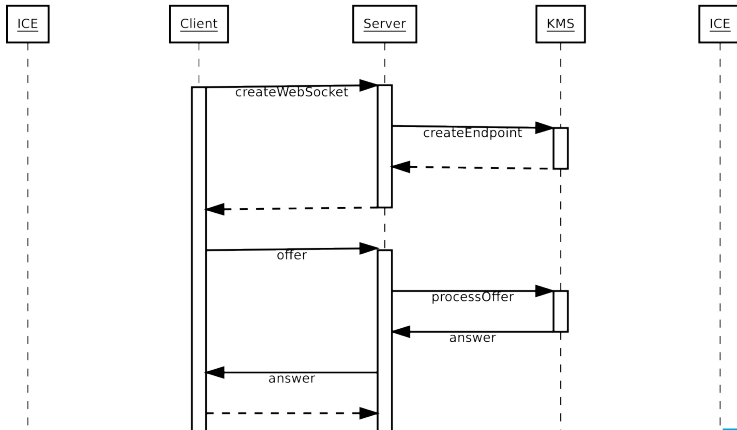

- **Signaling Server & Web Server:** Play Framework
- **Stream Server:** Kurento Media Server
- **Storage:** MongoDB & Kurento Repository
- **NAT Traversal:** Public STUN Servers

APPLICATION ARCHITECTURE

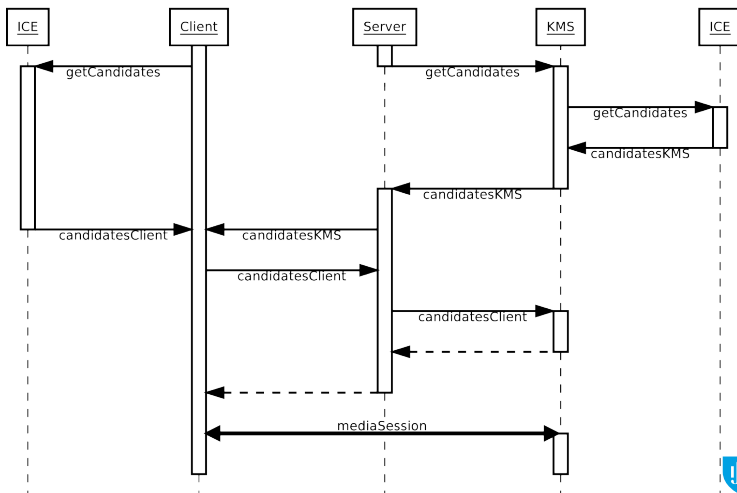

IMPLEMENTATION

SIGNALING PROTOCOL - PART 1

SIGNALING PROTOCOL - PART 2

STREAM OPERATIONS

- Server-side recording to database (Kurento Repository).
- Server-side stream composition.

HYPER-CONTENT

- Create & Search content
- Scheduler
- QR codes
- Security concerns

Select Time

TIME MANIPULATION

- Playback recordings
- Create & Search annotations
- Time Hyper-links

- Instant text messaging
 - WebSockets
- File sharing
 - HTTP file upload
 - stored in the database
- Collaborative text editor (OT.js)
 - retain
 - insert
 - delete

EVALUATION

PERFORMANCE TESTS AT SERVER - CPU USAGE

PERFORMANCE TESTS AT SERVER - MEMORY USAGE

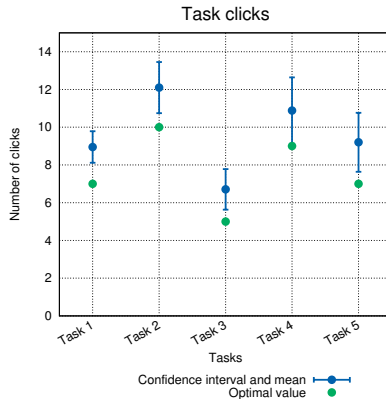

PERFORMANCE TESTS AT SERVER - NETWORK USAGE

PERFORMANCE TESTS AT CLIENT - NETWORK USAGE

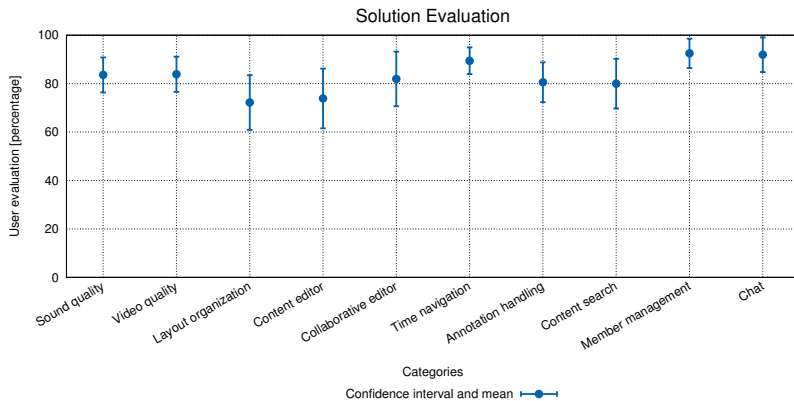

FIVE TASKS

- Difficulty per task.
- Errors per task.

OVERALL EVALUATION

CONCLUSIONS

CONCLUSIONS

- New usage scenarios for communication and collaboration applications.
- Enrich communications using hypermedia concepts. Record, playback and collaboration features.
- Prototype implementation and testing.

FUTURE WORK

FUTURE WORK

- Implement fast-forward playback.
- Improve solution's security.
- Scale our solution to multiple servers.

Questions?

PERFORMANCE TESTS - CPU (AVERAGE)

PERFORMANCE TESTS - NETWORK USAGE (AVERAGE)
